SOMMARIO - SUMMARIZE

SOMMARIO - SUMMARIZE

DRC Series helical gear units is a new generation mechanic-electrical integrated product, which designed basing on the modular system. It can be connected respectively with motors such a normal motor, brake motor, explosion-proof motors, frequency conversion motor, servo motor, IEC motor and so on. It can be mounted discretionary six orientation in solid space. This kind of product is widely used in drive fields such as textile, foodstuff, beverage, chemical industry, automatic arm ladder, automatic storage equipment, metallurgy, tobacco, environment-protection, logistics and so on.

La serie dei riduttori DRC è una nuova generazione di prodotti integrati meccanico-elettrico, disegnato su sistemi modulari. Può essere collegato con motori quali motori normali, autofrenanti, antiesplosione, servo motori e così via. Possono essere montati in 6 posizioni differenti. Questo tipo di prodotto è ampiamente utilizzato in settori quali, quello tessile, alimentare, industria chimica e così via.

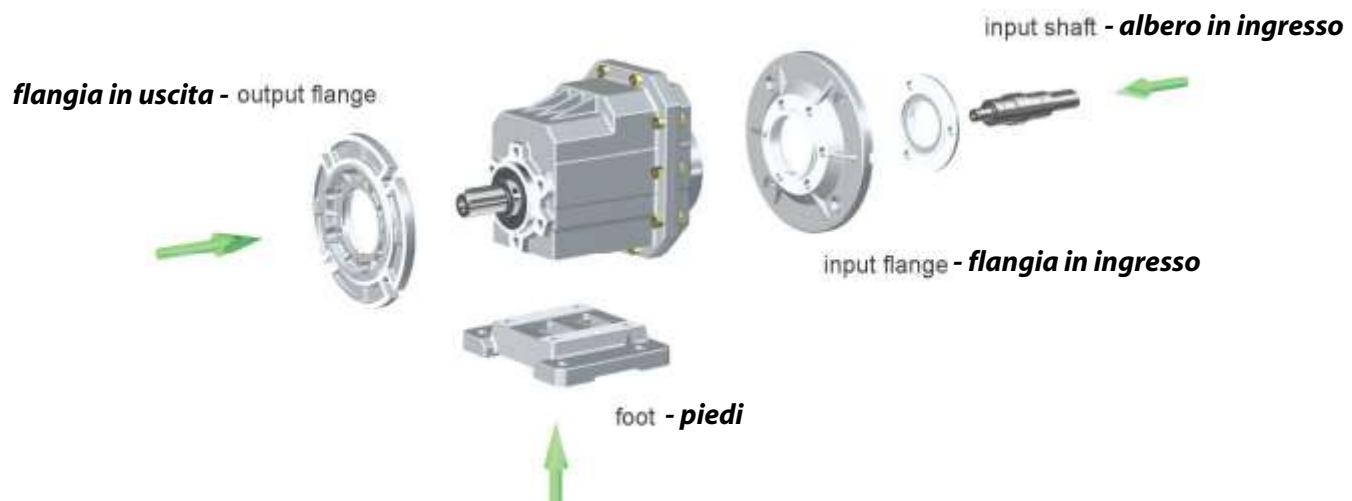

Caratteristiche del prodotto - Products characteristics

- * **Modularity** - Modularità
- * **High efficiency** - Alta efficienza
- * **Low noise**; - Bassa rumorosità
- * **Space effective, refined design** - Spazio efficace, disegno rifinito
- * **Universal mounting** - Montaggio universale
- * **Alluminium housing, light in weight** - Carcassa in alluminio
- * **Gears in carbonize hard, durable** - Ingranaggi in carbonato duro, alta durata
- * **Multistructure, can be combined in many forms to meet needs of all kinds of transmission condicions** - Multistruttura, può essere combinato in varie posizioni per incontrare qualsiasi necessità di trasmissione.

Drc Series helical gear units has more than 5 types. Power 0.12-8KW, Ratio 3.66-58,78; Torque max 120-500Nm. It can be connected (foot, flange) discretionary and use multi-mounting positions according to customer's requirements.

La serie DRC ha più di 5 tipologie. La potenza da 0,12 a 8KW, rapporti da 3,66 a 58,78. Coppia massima da 120 a 500 NM. Può essere sollegato (a piedi o flangiato) a seconda delle necessità del cliente.

3. SPIEGAZIONE DEI CODICI / MODEL ILLUMINATE

Riduttore / Gear unit

No		Comments
1	Codice indicante la serie DRC	Code for gear units series: DRC
2	1) Nessun codice: piedi montati 2) F: flangia B5 montata 3) Z: flangia B14 montata	1) No code means foot-mounted 2) F: B5 flange mounted 3) Z: B14 flange mounted
3	Taglia del riduttore: 01, 02, 03, 04, 05	Specification code of gear units: 01, 02, 03, 04, 05
4	1) PB, PM, PS = significa a piedi senza flangia 2) I, II, III: B5 specifica della flangia in uscita. Standard tipo I non indispensabile indicarlo	1) PB, PM, PS= means foot code, without flange 2) I, II, III: B5 Output flange specification, default I not to write out is ok
5	1) IEC: versione PAM, flangia in ingresso 2) HS: versione albero in ingresso maschio	1) IEC: input flange 2) HS: shaft input
6	i: Rapporto di riduzione	i: Transmission ratio of gear units
7	M1: posizione di montaggio. Standard M1 da non indicare	M1: Mounting position, default mountingposition M1 not to write out is ok

4. PARAMETRI IMPORTANTI

4.1 Potenza - P

$$P_1 = \frac{P_2}{\eta} \text{ [kW]}$$

$$P_{1n} \geq P_1 \cdot f_s \text{ [kW]}$$

 P_1 Potenza in ingresso P_2 Potenza in uscita P_{1n} Potenza del motore consigliata f_s Fattore di servizio η Rendimento

Il rendimento della serie DRC ha due stadi e l'efficienza è di circa il 96%

4.2 Velocità - n

$$n_1 \quad \text{Velocità in ingresso}$$

$$n_2 \quad \text{Velocità in uscita}$$

Sono consigliate velocità in ingresso di 1400 giri/min o inferiori in modo da prolungare la vita del riduttore. Lo stesso può funzionare anche con velocità in ingresso sino a 3000 giri ma va ridotta la coppia in uscita che può sopportare il riduttore.

4. RELEVANT PARAMETERS

4.1 Power P

$$P_1 = \frac{P_2}{\eta} \text{ [kW]}$$

$$P_{1n} \geq P_1 \cdot f_s \text{ [kW]}$$

 P_1 Input power P_2 Output power P_{1n} Rated power driving motor f_s Service factor η Transmission efficiency

DRC Series helical gear units has 2 stages and the efficiency is about 96%

4.2 Rotation speed n

$$n_1 \quad \text{Gear units input speed}$$

$$n_2 \quad \text{Gear units output speed}$$

If driven by the external gearing, 1400r/min or lower rotation speed is suggested so as to optimize the working conditions and prolong the service life. Higher input rotation speed is permitted, but in this situation, the rated torque **M2** will be reduced.

4.3 Rapporto di trasmissione - *i*

$$i = \frac{n_1}{n_2}$$

Abitualmente il rapporto di riduzione viene indicato considerando 2 numeri decimali dopo la virgola.

4.4 Coppia - *M*

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \text{ [Nm]}$$

$$M_{2n} \geq M_2 \cdot f_s \text{ [Nm]}$$

M₂ Coppia in uscita

M_{2n} Coppia in uscita nominale

P₁ Potenza in ingresso

η Rendimento

f_s Fattore di servizio

4.3 Transmission ratio *i*

$$i = \frac{n_1}{n_2}$$

Usually transmission ratio is decimal fraction with 2 radix point tagged in selection tables.

4.4 Torque *M*

$$M_2 = \frac{9550 \cdot P_1 \cdot \eta}{n_2} \text{ [Nm]}$$

$$M_{2n} \geq M_2 \cdot f_s \text{ [Nm]}$$

M₂ Output torque

M_{2n} Selected output torque

P₁ Input power

η Transmission efficiency

f_s Service factor

4.5 Fattore di servizio - *f_s*

Il fattore di servizio quantifica la maggiore o minore gravosità delle condizioni di funzionamento reali ovvero del servizio reale rispetto a quello nominale, determinando così il sovra o sottodimensionamento necessario per il riduttore che si deve scegliere.

Il grafico sotto riportato indica tre tipi di carico diversi che variano in funzione della massa da accelerare e dalla frequenza degli avviamenti. Dalla tabella dei parametri Si dovrà scegliere un riduttore che dia un fattore di servizio sempre superiore a 1.

4.5 Service factor *f_s*

The effect of the driven machine on the gear unit is taken into account to a sufficient level of accuracy using the service factor **f_s**. The service factor is determined according to the daily operating time and the starting frequency **Z**.

Three load classifications are considered depending on the mass acceleration factor. You can read off the service factor applicable to your application in following Figure. The service factor selected using this diagram must be less than or equal to the service factor as given in the performance parameter table.

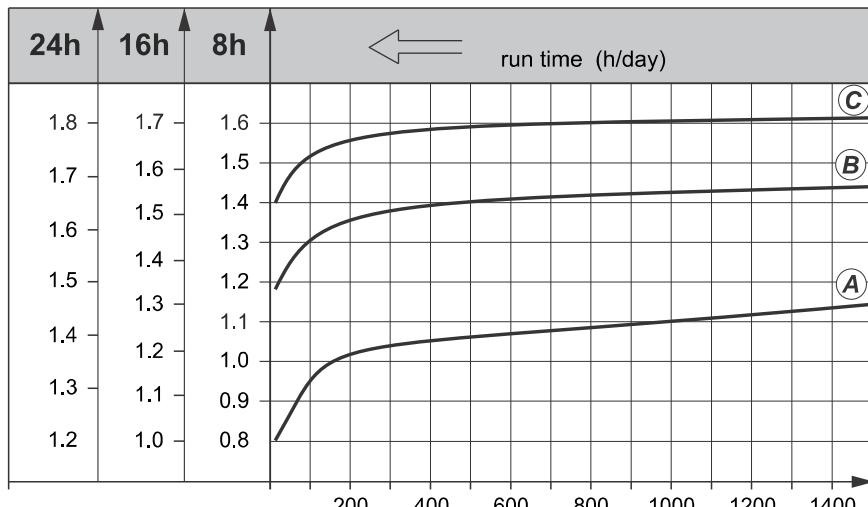

Fig.: Fattore di servizio (**f_s**)
Fig: Service factor (**f_s**)

Frequenza d'avvio **Z** (1/h) #
start up frequency **Z** (1/h) #

frequenza d'avvio **Z**: il ciclo include tutti gli avvii e le fermate in funzione del cambio della velocità.

starting frequency **Z**: The cycles include all starting and braking procedures as well as change overs from low to high speed.

4.5.1 Classifica dei carichi

- (A) Uniforme, con fattore di accelerazione $f_a \leq 0.2$
- (B) Carico di spunto moderato con fattore di accelerazione $f_a \leq 3$
- (C) Elevato carico di spunto con fattore di accelerazione $f_a \leq 10$

Esempi di applicazioni:

- Nastri trasportatori;
- Ventilatori, linee di assemblaggio, trasportatori a nastro, piccoli mescolatori, macchine per pulizia, macchine a controllo;
- Avvolgitori, Macchine lavorazione legno, ascensori, trasportatori per materiali pesanti, porte scorrevoli, macchine imballaggio, taglierine pompe piegatrici;
- Mescolatori per materiali pesanti, presse, cesoie mulini macinatori piegatrici buratti vibratori trituratori:

4.5.2 Fattore di accellerazione

Viene calcolato nel seguente modo:

$$f_a = \frac{J_c}{J_m}$$

f_a fattore di accelerazione

J_c momento di inerzia del carico (kgm^2)

J_m momento di inerzia del motore (kgm^2)

Nel caso il fattore di accelerazione risultasse $f_a > 10$, interpellare il nostro ufficio tecnico

Per ottenere una lunga durata del riduttore il fattore di servizio f_s selezionato dal catalogo deve essere uguale o meglio più alto di quello necessario, ottenuto tramite il diagramma descritto nella pagina precedente.

ESEMPIO:

Con fattore di accelerazione di 2,5 tipo (B) un servizio $f_s = 1.48$. e 200 cicli/ora, risulta che serve un fattore di servizio $f_s \geq 1.48$

4.5.1 load classifications

- (A) Uniform, permitted mass acceleration factor $f_a \leq 0.2$
- (B) Moderate shock load, permitted mass acceleration factor $f_a \leq 3$
- (C) Heavy shock load, permitted mass acceleration factor $f_a \leq 10$

Load classifications:

Screw feeders for light materials, fans, assembly lines, conveyor belts for light materials, small mixers, lifts, cleaning machines, fillers, control machines.

Winding devices, woodworking machine feeders, goods lifts, balancers, threading machines, medium mixers, conveyor belts for heavy materials, winches, sliding doors, fertilizer scrapers, packing machines, concrete mixers, crane mechanisms, milling cutters, folding machines, gear pumps.

Mixers for heavy materials, shears, presses, centrifuges, rotating supports, winches and lifts for heavy materials, grinding lathes, stone mills, bucket elevators, drilling machines, hammer mills, cam presses, folding machines, turntables, tumbling barrels, vibrators, shredders.

4.5.2 Mass acceleration factor

The mass acceleration factor is calculated as follows:

$$f_a = \frac{J_c}{J_m}$$

f_a Mass acceleration factor

J_c All external mass moments of inertia (kgm^2)

J_m Mass moment of inertia on the motor end (kgm^2)

If mass acceleration factors $f_a > 10$, please call our Technical Service.

To keep the service-life of gear units, the use factor f_s selected from the catalogue must be equal or slightly higher than the calculated use factor f_s .

Example:

Mass acceleration factor 2.5 (load classification (B)), 14 hours/day operating time (read off at 16 h/d) and 200 cycles/hour result in a service factor $f_s = 1.48$.

choose the service factor $f_s = 1.48$ according to the parameter sheet .

4.6 Sovraccarico e carichi assiali

Gli alberi in entrata e in uscita dei riduttori possono essere soggetti a dei carichi radiali esterni, causati dal tipo di trasmissione in uso. Il reale valore dei carichi radiali esterni può essere calcolato utilizzando la formula:

Transmission element	Transmission element factor f_z	Comments
Ingranaggi - Gears	1.00	< 17 teeth
Pignone catena - Chain sprockets	1.25	< 20 teeth
	1.40	< 13 teeth
V Puleggia -Narrow V-belt pulleys	1.75	Influence of the tensile force
Puleggia - Flat belt pulleys	2.50	Influence of the tensile force
Puleggia - Toothed belt pulleys	2.50	Influence of the tensile force

I sovraccarichi esercitati sull'albero sono calcolati come segue:

$$F_r = \frac{M \cdot 2000 \cdot f_z}{d_0} [N]$$

- F_r** Carico Radiale [N]
 M Forza sull' albero [Nm]
 d_0 Diametro degli elementi di trasmissione montati in [mm]
 f_z Coefficiente che dipende dal tipo di trasmissione

Il carico radiale permesso sull'albero viene calcolato con la seguente formula:

$$FxL \leq \frac{Fr_2 \cdot a}{(b+x)} [M]$$

- Fr_2** è il sovraccarico permesso ($X=L/2$) per un momtaggio a piedi
a,b costanti del riduttore, ricavabili dalle tabelle qui di seguito riportate
x distanza del punto di applicazione del carico dello spallamento dell'albero

4.6 Overhung loads and axial forces

When determining the resulting radial loads, the type of transmission elements, mounted on the shaft end must be considered. Various transmission elements are corresponding with following transmission element factors f_z :

The overhung loads exerted on the motor or gear shaft is then calculated as follows:

$$F_r = \frac{M \cdot 2000 \cdot f_z}{d_0} [N]$$

- F_r** Resulting radial load [N]
 M Torque on the shaft [Nm]
 d_0 Mean diameter of the mounted transmission element in [mm]
 f_z Transmission element factor

the maximum radial load on the shaft is calculated with the following

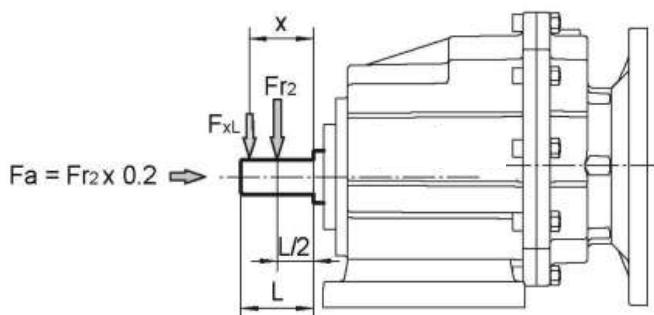

$$FxL \leq \frac{Fr_2 \cdot a}{(b+x)} [M]$$

- Fr_2** is the maximum overload permitted ($X=L/2$) for a feet mounting
a,b are constant of the gearbox (see the tables)
x is the distance between the point in which the load is applied and the shaft shoulder

DRC Costanti del riduttore / Gear unit constants for overhung load conversion:

	DRC01	DRC02	DRC03	DRC04	DRC05	
a	103	116.5	130	147	147

5. SELECTION EXAMPLE - Esempi di selezione

5.1 EXAMPLE 1 - ESEMPIO 1

Example: the required torque on driven machine is 400nM, works for 6 hours per day. Uniform shock load, start-up frequency is 400 times per hours, Ø200mm output flange-mounted, n2=30 r/min.

See table, fs=1.05

Esempio: la coppia richiesta è 400Nm. Lavora per 6 ore al giorno con carichi uniformi. La frequenza d'avvio è di 400 volte all'ora. La flangia in uscita montata è Ø200mm e n2=30 r/min.

Vedere la tabella, fs=1.05

$$M_{2n} \geq M_2 \cdot f_s = 400 \times 1.05 = 420[\text{Nm}]$$

$$i = \frac{n_1}{n_2} = \frac{1400}{30} = 46.67$$

Choose type:

DRCF04 II - P90B5 - 44.18

5.2 EXAMPLE 1 - ESEMPIO 1

Example: the required power on driven machine is 1kW, works for 8 hours per day. Moderate shock load, start-up continuously, M6 foot-mounted, n2=95 r/min.

See table, fs=1.35

Esempio: la potenza richiesta è 1kW. Lavora per 8 ore al giorno con carichi moderati. Avvi continui, posizione di montaggio M6 a piedi e n2=95 r/min.

Vedere la tabella, fs=1.35

$$i = \frac{n_1}{n_2} = \frac{1400}{95} = 14.74$$

$$P_{1n} \geq P_1 \cdot f_s = \frac{P_2}{\eta} \cdot f_s = \frac{1}{0.96} \times 1.35 = 1.41[\text{kW}]$$

Choose type:

DRC02 - P90B5 - 14.81 - M6 - 1.5-4

9. Quantità di lubrificante

9.1 Informazioni generali

Si raccomanda di osservare scrupolosamente le quantità di lubrificante. La quantità precisa varia a seconda della posizione di montaggio

Vi preghiamo indicare sempre in fase d'ordine anche la posizione di montaggio. Nel caso di variazione si prega variare la quantità di lubrificante a seconda della nuova posizione seguendo la tabella per la corretta quantità

9.2 Informazioni generali

Nella tabella sotto indicata sono riportati i lubrificanti consigliati. Vedere tabella sotto riportata

9. LUBRIFICANT

9.1 General information

Unless a special arrangement is made, we supply the drives with a lubricant fill adapted for the specific gear unit and mounting position. The decisive factor is the mounting position (M1... M6) specified when ordering the drive. You must adapt the lubricant fill in case of any subsequent changes made to the mounting position (Lubricant fill quantities)

9.2 Anti-friction bearing greases

The lubricant table on the following page shows the permitted lubricants for our gear units. Please note the following key to the lubricant table:

	Temperature	Manufacture	Style	lubrication type
rolling bearing of gear box	-20°C ~ +60°C	Mobil	Mobilux EP 2	Mineral oil
	-40°C ~ +80°C	Mobil	Mobiltemp SHC 100	Synthetic oil
rolling bearing of gear motor	-20°C ~ +80°C	Esso	Unirex EQ3	Mineral oil
	-20°C ~ +60°C	Shell	Alvania RL3	Mineral oil
	-45°C ~ +25°C	Shell	Aero Shell Grease 16	Synthetic oil

11. LUBRIFICAZIONE / LUBRICATION

11.1 Tipi di lubrificanti / Types of lubrication

						tipi di lubrificante lubrication type
DRC	标准 Standard -10	+40	VG 220	Shell Omala 220	Mobilgear 630	BP Energol GR-XP 220
	-20	+25	VG 150 VG 100	Shell Omala 100	Mobilgear 627	BP Energol GR-XP 100
	-30	+10	VG 68-46 VG 32	Shell Tellus T 32	Mobil D.T.E. 13M	
	-40	-20	VG 22 VG 15	Shell Tellus T 15	Mobil D.T.E. 11M	BP Energol HLP-HM 15
	-40	+80	VG 220	Shell Omala HD 220	Mobil SHC 630	
	-40	+40	VG 150		Mobil SHC 629	
	-40	+10	VG 32		Mobil SHC 624	

DRC Quantità di lubrificante / Lubricant fill quantity

Gear units	Quantità di lubrificante in litri - Fill quantity in liters						(L)
	M1	M2	M3	M4	M5	M6	
DRC..01..	0.4	0.6	0.4	0.3	0.3	0.3	
DRC..02..	0.5	0.7	0.5	0.4	0.4	0.4	
DRC..03..	0.8	1.1	0.8	0.6	0.6	0.6

DRC..05..	1.2	1.6	1.0	1.0	0.9	0.9	

10. MODI D'INSTALLAZIONE

10.1 Preparazione prima dell'installazione

- 1) Verificare che i dati sulla targhetta siano corretti.
- 2) Verificare che la temperatura dell'ambiente sia corretta con quella indicata nella tabella dei lubrificanti.
- 3) Il riduttore non deve essere assemblato in condizioni sfavorevoli quali olio, gas ecc
- 4) Albero e flangia devono essere periodicamente puliti per evitare corrosione e contaminazione. Usare un solvente commerciale e assicurarsi che non entri in contatto con anelli perchè potrebbe danneggiare il materiale

10.2 Informazioni generali

- 1) Non comprimere piedi e flangia contro altro ed assicurarsi che soddisfino i carichi assiali e radiali consentiti.
- 2) Non spingere puleggia e pignoni o altro sull'albero. Potrebbero danneggiare i cuscinetti, la carcassa o l'albero
- 3) Prima di avviare l'applicazione varificare che l'olio sia adeguato alla posizione di montaggio. Verificare che la valvola si stia, ove presente, sia pulita e libera da ogni residuo di olio.

10. INSTALLATION METHODS

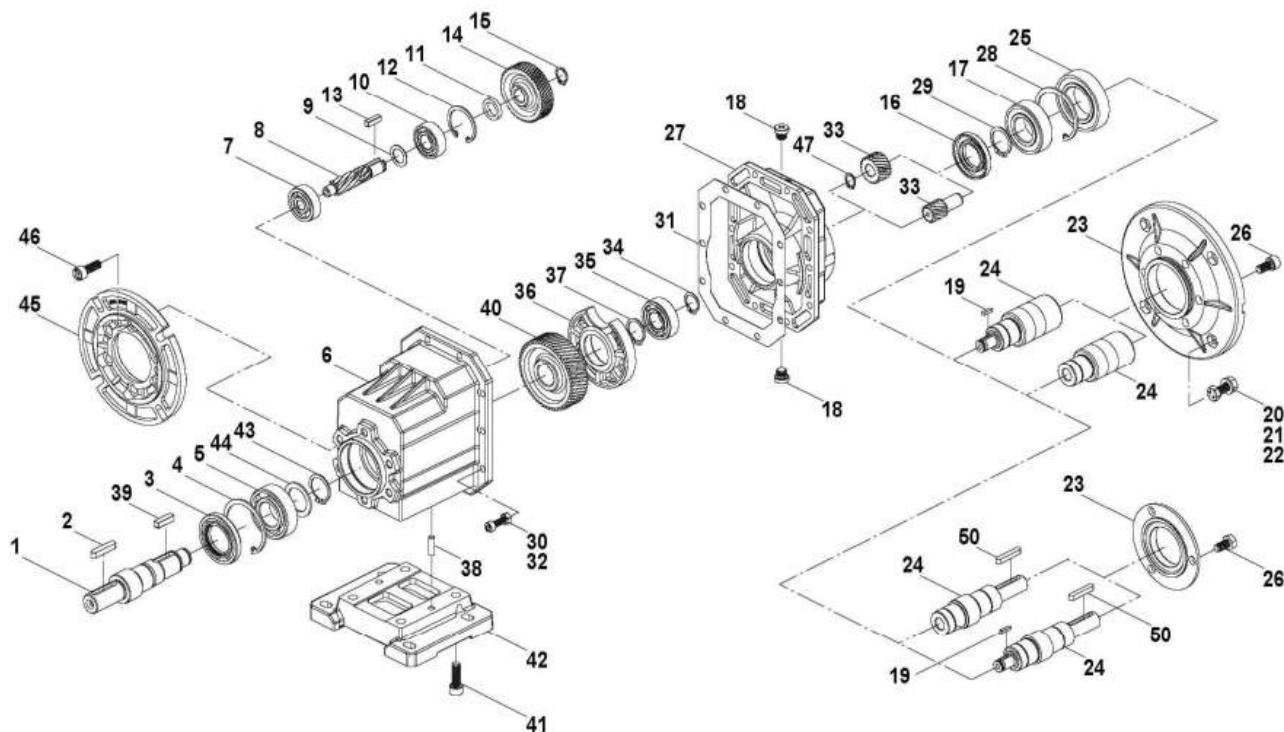

10.1 Preparation before the installation

- 1) Check if the data on the nameplates of the gear motor matches the voltage supply system.
- 2) For standard gear unit, the ambient temperature must be in accordance with the corresponding lubricant table.
- 3) The drive must not be assembled in conditions such as oil, gas, vapors, acids, radiation and so on.
- 4) Output shaft and flange surfaces must thoroughly cleaned to ensure they are free of anti-corrosion agents, contamination or similar. Use a commercial available solvent. Do not let the solvent come into contact with the sealing lip of the oil seals, or will damage the material!

10.2 Installation of the gear units

- 1) Do not tighten the housing legs and mounting flanges against one another and ensure that you comply with the permitted radial load and axial load.
- 2) Never drive belt pulleys, couplings, pinions, etc into the shaft and by hitting them with a hammer. This will damage the bearing, housing and the shaft.
- 3) Prior to startup, check that if the oil level is as specified for the mounting position. If the oil checking and drain screw and the breather valves are free accessible.

Basic structure - Esploso prodotto

1 Output shaft/Albero in uscita	17 Bearing / Cuscinetto	33 Pinion / Pignone
2 Key / Chiavetta	18 Oil plug / Tappo dell'olio	34 Shaft circlip / Seeger
3 Oil seal / Anello di tenuta	19 Key / Chiavetta	35 Bearing / Cuscinetto
4 Hole circlip / Seeger	20 Hex head bolt / Vite	36 Support seat / Supporto
5 Bearing / Cuscinetto	21 Washe / Vite	37 Shaft circlip / Seeger
6 Gear box / Carcassa	22 Hex nut / testa vite	38 Cylindrical pin / Perno cilindrico
7 Bearing / Cuscinetto	23 Input flange / Flangia in ingresso	39 Key / Chiavetta
8 Pinion shaft / Albero pignone	24 Input shaft / Albero in ingresso	40 Gear / Ruota
9 Anello di tenuta / Oil seal	25 Bearing / Cuscinetto	41 Socket head cap screw/Testa vite
10 Bearing / Cuscinetto	26 Socket head cap screw/Testa vite	42 Foot / Piedi
11 Spacer ring / Anello	27 Input cover / Coperchio in ingresso	43 Shaft circlip / Seeger
12 Hole circlip / Seeger	28 Hole circlip / Seeger	44 Washe / Vite
13 Key / Chiavetta	29 Shaft circlip / Seeger	45 Output flange / Flangia in uscita
14 Gear / Ruota	30 Hex nut / testa vite	46 Hex socket screws / Vite a brugola esagonale
15 Shaft circlip / Seeger	31 Housing gasket / Guarnizione	47 Shaft circlip / Seeger
16 Oil seal / Anello di tenuta	32 Socket head cap screw/Testa vite	50 Key / Chiavetta
